

# HR4000 Spectrometer

## User-Configured for Flexibility

### HR4000

Inside the HR4000 Spectrometer is a 3648-element CCD-array Toshiba detector that enables optical resolution as precise as 0.02 nm (FWHM). Responsive from 200-1100 nm, the HR4000 can be customized for your setup needs through a choice of gratings, slits and other optical bench options.

The HR4000 gives you the freedom to set integration time and features an electronic shutter that helps minimize saturation – even with 3.8 ms integration.

The HR4000 interfaces easily with your computer or PLC through USB 2.0 or RS-232 ports. And, with its 10 user-programmable digital inputs/outputs, the HR4000 offers unparalleled connectivity with external equipment.

### Features

- Onboard microcontroller and electronic shutter
- 0.02 nm optical resolution (FWHM) possible
- Choice of configurations and accessories

### Technical Tip

The dynamic range of a system is the full scale signal divided by the minimum resolvable signal. For our spectrometers, the minimum resolvable signal is the standard deviation of the dark signal. A

common misunderstanding is to interchange dynamic range and A/D resolution. However, a dynamic range measurement includes the system's minimum noise level (e.g., detector readout noise and electronic noise). It's most applicable to low light level applications because it defines minimum detectable signal.
